Atmospheric pressure sensor specifications

A miniature 5 x 3 x 1.2 mm LGA package is ideally suited for the space constrained requirements of portable electronic devices. Low current consumptions of 5 μ A during Active mode and 1 μ A during Shutdown (Sleep) mode are essential when focusing on low-power applications. The wide operating temperature range spans from $-40\text{ }^{\circ}\text{C}$ to $+105\text{ }^{\circ}\text{C}$ to fit demanding environment conditions.

The MPL115A1 employs a MEMS pressure sensor with a conditioning IC to provide accurate pressure measurements from 50 to 115 kPa. An integrated ADC converts pressure and temperature sensor readings to digitized outputs via a SPI port. Factory calibration data is stored internally in an on-board ROM. Utilizing the raw sensor output and calibration data, the host microcontroller executes a compensation algorithm to render *Compensated Absolute Pressure* with ± 1 kPa accuracy
